STRUCTURAL DESIGN - I
(2012Pattern) (Semester - I)

Time : 1½ Hour

Max. Marks : 30

Instructions to the candidates:

- 1) Answer Q.No1 or Q.No.2 Q.No.3 or Q.No.4, Q.No.5 or Q.No.6.
- 2) Neat diagrams must be drawn wherever necessary.
- 3) Figures to the right indicate full marks.
- 4) Take Fe 410 grade of steel.
- 5) Take ultimate stress in bolt, $F_{ub} = 400 \text{ N/mm}^2$.
- 6) Assume suitable data, if necessary.
- 7) Use of electronic pocket calculator Is: 800-2007 and steel table allowed.
- 8) Use of cell phone is prohibited in the examination hall.

- Q1)** a) State and explain classification of cross section with bending stress distribution. [4]
b) Design a double angles tension members connected on each side of 10 mm thick gusset plate to carry an axial load of 340 kN. Use shop weld for connection. [6]

OR

- Q2)** a) Explain partial safety factors and characteristic load in limit state design. [4]
b) A tension member of roof truss consists of 2 ISA 90 × 90 × 12 mm @ 15.8 kg/m placed back to back connect to 12 mm thick gusset plate by 5 bolt of 20 mm diameter. Determine design tensile strength due to yielding and rupture. [6]

- Q3)** a) State and explain the factors affecting design strength of compression members. [4]
b) Check the adequacy of 2 ISA 80 × 80 × 8 @ 9.6 Kg/m to factored axial compressive load of 180 kN. Two angles are connected on either side of 10 mm thick gusset plate by 4 numbers of M 20 black bolts of 4.6 grades. The effective length of strut is 2.5m. [6]

OR

P.T.O.

Q4) A column consisting of 2 - ISMC 350 @ 42.1 Kg/m Spaced by 220 mm for an effective length 6 m to carry factored axial compressive load of 1800 kN. Design a suitable batten system with bolted connection and draw the design details. [10]

Q5) Design a gusseted base for a column ISHB 350 @ 67.4 Kg/m supporting a factored axial compression of 1700 kN. Consider grade of concrete as M20 and gusset angle ISA 150 × 115× 15mm. [10]

OR

Q6) A column section ISHB 300@ 63.0kg/m having effective length of 4 m is subjected to factored axial load of 650 kN and factored moment of 50 kNm about major axis. Determine the section strength. [10]
